SUMMARY

B.Sc. Computer Science (Cloud Computing) student pursuing Honours with hands-on experience in Linux, AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub, and cloud infrastructure. Experienced in Infrastructure as Code, containerized application deployment, CI/CD pipelines, Kubernetes orchestration, AWS networking, database deployment, and troubleshooting. Strong interest in DevOps, Cloud Infrastructure, and IT Operations.

PROJECTS

Multi-Environment AWS Infrastructure Provisioning Using Terraform

Terraform, AWS, VPC, EC2, RDS, S3, DynamoDB, Datadog, GitHub

- Designed reusable Terraform configurations to provision AWS infrastructure across Development, Staging, and Production environments.
- Developed reusable Terraform modules for VPC, subnets, security groups, EC2, and RDS to improve infrastructure consistency and maintainability.
- Configured environment-specific variables using `.tfvars` files for repeatable infrastructure provisioning.
- Configured remote Terraform state storage in Amazon S3 and state locking using DynamoDB, where supported by the backend configuration.
- Integrated Datadog to monitor AWS infrastructure metrics and resource utilization across environments.
- Used GitHub for version control and management of Terraform configuration files.

Automated Application Deployment and Monitoring Using Jenkins CI/CD

Jenkins, Docker, GitHub, AWS EC2, Auto Scaling, Elastic Load Balancing, RDS MySQL, Datadog, Linux

- Containerized a web application using Docker to package application code and dependencies into portable images.
- Integrated GitHub with Jenkins to automate source-code checkout, application builds, and CI/CD pipeline execution.
- Automated Docker image building, image publishing to a container registry, and application deployment using a Jenkins pipeline.
- Configured AWS Auto Scaling and Elastic Load Balancing to distribute application traffic and support application availability across EC2 instances.
- Integrated Amazon RDS for MySQL to provide persistent database storage and configured application-to-database connectivity.
- Integrated Datadog to monitor application and infrastructure metrics and assist with troubleshooting deployment issues.
- Used Linux, Git, Docker, Jenkins, and AWS CLI to validate deployments and troubleshoot application and database connectivity.

IT INFRASTRUCTURE SKILLS

Operating Systems: Linux (Ubuntu), Windows
Networking: TCP/IP, DNS, SSH, Basic Networking Concepts
Infrastructure: Server Administration, User Management, Remote Administration
IT Support: System Troubleshooting, Software Installation, Infrastructure Deployment

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, GCP
Containers & Orchestration: Docker, Kubernetes
Infrastructure as Code: Terraform, AWS CloudFormation
CI/CD Tools: Jenkins
Monitoring: CloudWatch, Datadog
Version Control: Git, GitHub, GitLab
Operating Systems & Scripting: Linux, Bash, Shell Scripting
Development Tools: VS Code, AWS CLI, kubectl

RELEVANT COURSEWORK

- Cloud Computing
- Computer Networks
- DevOps and CI/CD
- Infrastructure as Code (Terraform)
- Computer Security
- Operating Systems
- Linux Administration
- Cloud Infrastructure Management
- Containerization and Orchestration

SOFT SKILLS

- Problem Solving
- Troubleshooting
- Analytical Thinking
- Communication
- Team Collaboration

EDUCATION

MIT World Peace University **Aug 2023 – Present**
B.Sc. Computer Science (Cloud Computing) – Pursuing Honours *Pune, India*

MIT Jr. College **Jun 2022 – Mar 2023**
Higher Secondary Certificate (Science – PCM) *Pune, India*
